SUMMARY

Software Developer experienced in building scalable backend systems, full-stack applications, real-time market data platforms, and AI-assisted development workflows. Strong background in Rust, JavaScript, WebSockets, PostgreSQL, Redis, Docker, and Nginx, with hands-on experience using Claude Code, CLI-based AI coding agents, and modern AI developer tools for codebase analysis, implementation, debugging, refactoring, and documentation. Experienced in developing low-latency trading infrastructure, market data processing pipelines, strategy backtesting systems, and containerized services.

SKILLS

Languages: JavaScript, Rust, Java, C, C++, SQL, HTML, CSS, Prisma Schema Language

Frontend: React.js, Next.js, Electron.js, Bootstrap, GSAP, jQuery, Responsive Design

Backend and Real-Time Systems: Node.js, Express.js, Java Servlets, JSP, REST APIs, WebSockets, Authentication, Authorization

Databases and Caching: PostgreSQL, PgBouncer, MongoDB, MySQL, SQLite, Redis, Redis Lists, Redis Hashes, Schema Design, Query Optimization

DevOps and Tools: Docker, Docker Compose, Nginx, Git, GitHub, Postman, MySQL Workbench

AI-Assisted Development: Claude Code, OpenAI Codex CLI, CLI-based AI Coding Agents, AI Developer Tools, Prompt Engineering, Codebase Analysis, AI-Assisted Debugging, Refactoring, Documentation and Automation

Concepts: Data Structures and Algorithms, Object-Oriented Programming, Live Data Processing, Caching, API Optimization, Database Indexing, Debugging, Web Security, System Design Basics

EXPERIENCE

Young Turtle LLP

Software Developer

Nov 2025 – Present

Ahmedabad, Gujarat

- Developing algorithmic trading infrastructure supporting, strategy backtesting, seasonality analysis, and real-time market data systems used for market research and trading workflows.
- Developed a full-stack seasonality platform that allows users to configure trading strategies, apply historical filters, and analyze recurring market patterns across historical data.
- Developed core components of an algorithmic trading platform for live tick-by-tick market data ingestion, one-minute OHLC candle generation, deployed strategy evaluation, buy/sell signal generation, and paper-trading workflows.
- Implemented WebSocket-based pipelines for continuously receiving and processing market ticks with timestamp validation, market-session filtering, and duplicate-tick handling.
- Enhanced Rust-based market data services responsible for tick consumption, candle creation, candle closure, strategy routing, and real-time market data publishing.
- Optimized Redis Lists and Hashes to manage live candles, strategy state, market data, and frequently accessed information for low-latency processing and frontend chart delivery.
- Maintained consistency between Redis and PostgreSQL through PgBouncer while processing OHLC updates, corrective high-low updates, finalized candle persistence, and real-time market data.
- Used Claude Code, OpenAI Codex CLI, and other CLI-based AI coding agents to accelerate codebase exploration, implementation, debugging, refactoring, documentation, and repetitive development workflows.
- Containerized frontend, backend, market data services, PostgreSQL, PgBouncer, Redis, and Nginx using Docker and Docker Compose for consistent development and deployment environments.
- Configured Nginx as a reverse proxy for routing frontend, backend API, and real-time service traffic across containerized services.
- **Technologies:** Rust, JavaScript, WebSockets, PostgreSQL, PgBouncer, Redis, Docker, Docker Compose, Nginx, Claude Code, Codex CLI, and AI coding agents.

ISRO – Space Applications Centre (SAC)

Software Development Intern

Jun 2025 – Sept 2025

Ahmedabad, Gujarat

- Worked on real-time internal tools as a full-stack developer.
- Developed backend features using Java Servlets and Java DAO for internal application workflows.
- Collaborated on software modules involving backend logic, database interaction, debugging, and application functionality.

PROJECTS

Animal Medicine Record Keeper | Node.js, Express.js, Electron.js, SQLite3

- Built a desktop application for veterinary clinics to manage medicine records and clinic data.
- Implemented role-based access control for different users and responsibilities.
- Added Excel upload and download functionality to simplify record import, export, and reporting.

Foodie | React.js, Node.js, Express.js, MongoDB

- Developed a food delivery web application with user authentication, cart management, and multi-address support.
- Created backend APIs for users, food items, cart operations, and address management.
- Built responsive frontend screens using React.js to provide a smooth user experience across devices.

TurboTypist | JavaScript, HTML, CSS

- Built a typing speed test application with multiple difficulty levels and user performance tracking.
- Developed an admin dashboard for managing typing content and application data.
- Won First Runner Up and Best UI/UX awards in a university-level Web Horizons competition for this project.

EDUCATION

Marwadi University

Rajkot, Gujarat

B.Tech in Computer Engineering | CGPA: 8.89/10

Gujarat Secondary and Higher Secondary Education Board

Gujarat

H.S.C. Science: 67.92 PR | S.S.C.: 99.31 PR

AWARDS

First Runner Up – Web Horizons Competition

Marwadi University

- Developed the assigned user interface as part of a three-member team and secured the First Runner Up position.
- Also won 1st prize for Best UI/UX for the TurboTypist project.

ADDITIONAL INFORMATION

Languages: English, Hindi, Gujarati

Hobbies: Sports, Gaming
